Worldwide leader in vibration technology

OLI is the world's top selling manufacturer of Electric and Pneumatic Vibrators. A high level of customer service is guaranteed through 20 OLI Trading Subsidiaries, 70+ local warehouses and 4 manufacturing plants worldwide.

OUR 3 DIVISIONS

PROVIDE CUSTOMERS WITH OPTIMAL SOLUTIONS FOR ALL REQUIREMENTS

INDUSTRIAL VIBRATORS	FLOW AIDS	CONCRETE CONSOLIDATION
 <p>Electric motovibrators for vibrating equipment.</p>	 <p>Comprehensive range of electric and pneumatic vibrators to solve any problem of flowability.</p>	 <p>Internal and external vibrators, converters and accessories for reliable and efficient concrete compaction.</p>

Originally specialising in immersion vibrators for concrete consolidation, OLI is now the worldwide leader in vibration technology, with a **complete range of electric and pneumatic internal and external vibrators.**

By supplying **competitive, high quality products for wide-ranging applications,** OLI combines **performance** and **reliability** by adapting to the ever-changing market. A strong believer in innovation, OLI is constantly striving to be ahead of the opposition.

As a global player in industrial vibration technology, the key focus of OLI's business strategy is **rapid stock delivery, any time, anywhere in the world.**

Excellent customer service is of pivotal importance: the company guarantees **quick order processing** and customers worldwide can enjoy access to the same high quality product and services.

OLI has access to credible expertise when it comes to finding suitable solutions to customers' requests. A team of engineers specialised in designing efficient, reliable, and safe solutions backed by **globally certified management.**

OLI provides their customers with state-of-the-art equipment and the blueprint for the next generation of products is already in progress.

TECHNICAL FEATURES

QUALITY

- World class materials
- Class F insulation
- Durable sealing
- Premium bearings
- Strong body design - FEM designed
- Vacuum insulation
- FMEA analysis
- 3D quality check

EFFICIENCY

- Optimised power/weight ratio
- S1 continuous duty service
- Optimized electric design

RELIABILITY

- PTC thermistor 130 °C
- Specific grease retaining device
- Tropicalised standard
- IP66 protection
- Class F insulation

FLEXIBILITY

- Easy mass adjustment
- Various voltages and frequencies available
- Easy access to the terminal box
- Multiple eye-bolts

The OLI Vibrator Range

Providing centrifugal force up to 26,000 kgs and with multiple voltage options OLI's range of electric motovibrators covers several fields of application in every country as well as many different industrial sectors: from food to mining, from foundry to recycling and more.

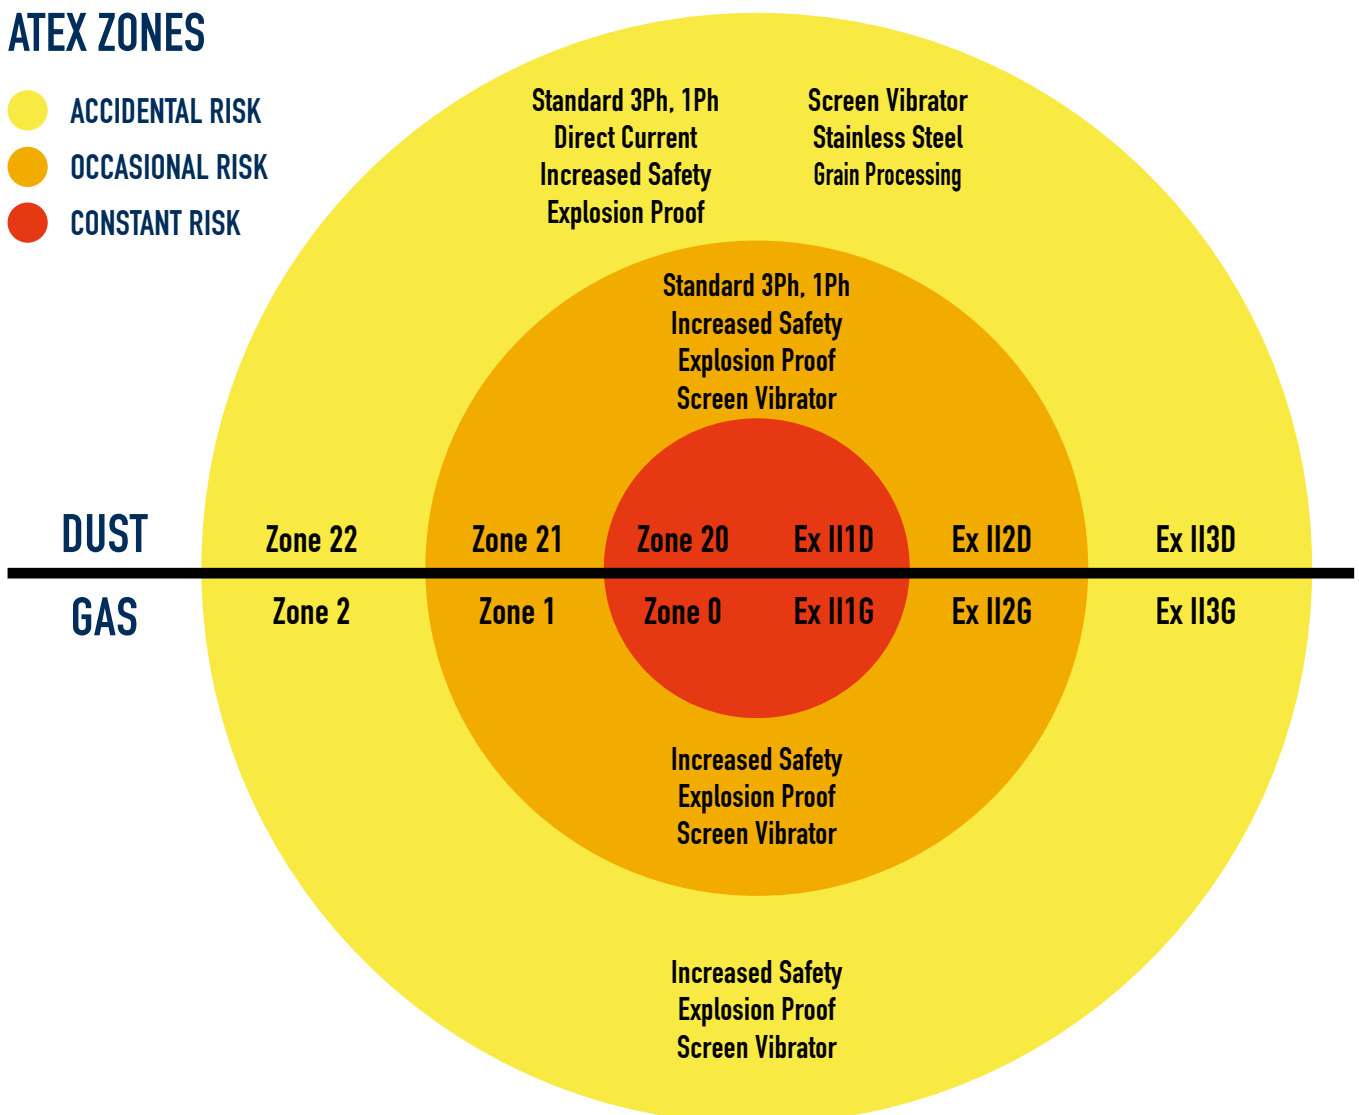

OLI's electric motovibrators are designed and manufactured using the latest technologies and premium quality materials and components.

Vibrator bodies, bearing flanges and shafts are FMEA designed and manufactured using first grade Aluminium alloy, cast iron and steel alloy to withstand heavy duty

applications and guarantee safe operation in any condition. Vacuum impregnated windings and class F insulating materials enhance reliability and durability. Top quality bearings and an efficient grease retaining system assure long lasting performance and low noise generation. Adjustable eccentric masses allow easy fine tuning of the Max centrifugal force provided by the vibrator. Several certifications for use in hazardous environments are available in the OLI range to match the most demanding specification worldwide.

How to choose a motovibrator

1.

Choose rpm and the amplitude "e" (0 - peak) suitable for your application:

Circular vibration

Linear vibration

Application processes	Vibration		Revolutions Per Minute					
			50Hz	750	1000	1500	3000	6000
	Circular	Linear	60Hz	900	1200	1800	3600	-
Conveying		✓			✓	✓		
Separation / Screening / Sizing		✓		✓	✓	✓		
Positioning / Feeding		✓		✓	✓	✓		
Filter cleaning	✓						✓	
Silo/hopper emptying	✓						✓	
Fluid beds		✓		✓	✓			
Bin activators	✓					✓	✓	
Compacting		✓					✓	✓
Concrete consolidation	✓						✓	✓

rpm	e (mm)	
	Min.	Max.
3,600	0.3	0.6
3,000	0.3	0.8
1,800	1.2	2.2
1,500	1.4	2.6
1,200	2.5	4.0
1,000	3.0	5.2
900	3.5	5.5
750	3.5	6.0

2.

Choose an MVE from the tables of the following pages and use its W_m into this formula:

$$e = 5 \times \frac{n \times W_m}{n \times M_{mot} + M_{vm}}$$

e = amplitude of vibration 0-peak

(mm)n = number of vibrators

W_m = working moment (kgcm)

M_{mot} = vibrator weight (kg)

M_{vm} = vibrating machine weight (without material and vibrators)

3.

Check the obtained value "e":

- If it is similar to the required one (step 1) → the MVE model is correct.
- If it is not similar to the required one (step 1) → repeat the process (step 2) with a different MVE model.

For tips on installation see page 44

Standard Rated Voltages

Several voltages are available to match local electric specifications worldwide both at 50Hz and 60Hz.

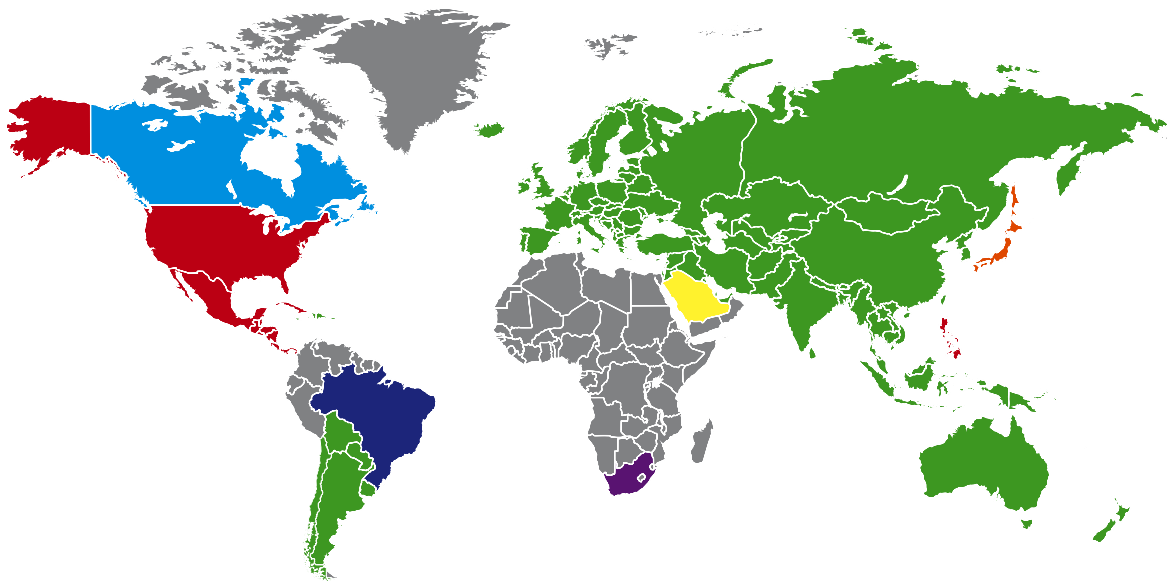

All OLI vibrators can be operated with double voltage by simply changing the connections inside the terminal box from **Star** to **Delta** or vice-versa.

As a general rule MVEs with rated power >4,3kW have standard Delta terminal box connection, with the only exception of MVE 5000/3E-75A1. Smaller MVEs have standard Star terminal box connection. Refer to the product specification charts to see the factory setting for each model.

	Voltages	Hz
	200-230/345-400 V	50/60
	220-240/380-415 V 380-415 V (Delta) *	50 50
	230/460 V * 460 V (Delta)	60 60
	330/575 V 575 V (Delta) * 460 V (Delta)	60 60 60
	290-300/500-525 V 500-525 V (Delta)	50 50
	207-253/414-480 V	60
	220-240/380-415 V 220-277/380-480 V 380/415 V (Delta) 460 V (Delta)	50 60 50 60

For details about "Star" and "Delta" connections see page 45.

Optionals

STEEL-IT
Specifically developed for food applications featuring a special coating containing AiSi 316L stainless steel.

EXTENDED SHAFTS
Designed for multiple vibrator application.
Available on request.

STAINLESS STEEL COVERS
Available with clean finishing. AiSi 304 stainless steel mass covers (on request) for the most demanding applications. Available of to size 91.

HEATERS
To be used in severe cold environment.

SPLIT COVERS
Developed for space saving applications. Available from size 60 and above.

FOOTPRINT
Competitor's footprint available on request.

IMPORTANT:

Rated voltage might change according to the certification level permitted when some optionals are chosen.

INSTALLATION

Mounting

The base plate surface where the vibrator is mounted has an allowable tolerance of 0.25mm (0.01in), so that the surfaces rest uniformly against each other to avoid internal tension that may cause breakage of the foot of the vibrator.

Use 8.8 type bolts, 8.0 type nuts and flat washers belonging to category A EN ISO 7089 / 7092.

The graph below shows the correct torque settings for the different bolt sizes used on the vibrators.

Electrical connection

Verify that the voltage and frequency supply match the ones indicated on the rating plate of the electric vibrator.

If the vibrator is operated via a variable frequency drive do not run it under 20 Hz and not over the rated frequency.

Insert the power cable through the cable gland. The lead-in wires have to be of the eyelet-type, pre-insulated, with a bore that suits the terminals of the junction box in order to prevent overheating of the wire. Use only conductors that have a suitable cross-section.

Connect the lead wires to the pins (as shown in the diagram below) and tighten them with the specified torque.

Do not forget to fix the earthing cable to the provided studs → Compulsory connection!

Before closing the junction box make sure that the cover gasket is properly fitted in order to keep the specified IP protection.

For more details on vibrator installation refer to product manuals.

M8	6	4.43
M10	8	5.90

TERMINAL CONNECTIONS

Check "Terminal Connection" column label to know the factory preset connection of each vibrator.

Overload protection

All electric vibrators **MUST** be connected to a suitable external overload protection.

When using two electric vibrators in sync, each of them has to be connected to an external overload protection that must be interlocked to make sure both vibrators are stopped if one fails.

Always use a thermal-magnetic type vibrator

protection, with delayed cut-off, to avoid stopping the vibrator during start-up when the current draw is higher than the rated running current for a few seconds.

Cut-off of the overload protection should be set at a maximum of +10% of the rated current.

2 TIPS TO CORRECTLY ADJUST MASSES:

Rotate the mass following the design on the plate: from the thicker tip towards the thin tip.

for sizes up to 60*

Rotate the masses in the opposite direction to the cable gland.

ADJUSTED MASSES

For technical information on the regulation of blade masses refer to the Use and Maintenance Manual.

Warning:
DO NOT grease new motors before installation.

OLI motors with roller bearings leave the factory filled with the right quantity of grease while those with ball bearing do not need any lubrication.
